## Gut Health Solution

| HOW TO USE SANTRON                  | Fish                     |                             | Shrimp                   |                             |
|-------------------------------------|--------------------------|-----------------------------|--------------------------|-----------------------------|
|                                     | Normal<br>(g/kg of feed) | Challenge<br>(g/kg of feed) | Normal<br>(g/kg of feed) | Challenge<br>(g/kg of feed) |
| Nursery                             | 2                        | 5                           | 5                        | 10                          |
| Grow-out (<100 con/m <sup>2</sup> ) | 1                        | 3                           | 2                        | 5                           |
| Grow-out (>100 con/m <sup>2</sup> ) | 1                        | 3                           | 5                        | 10                          |

Under normal condition, Santron can be fed continuously for maintaining optimal gut health.

Under challenging conditions such as reduced appetite, digestive problems and gut inflammations, use Santron for 1-2 weeks or as long as the challenge persist.

### APPLICATION METHOD

Mix Santron with the feed by hand (use proper gloves) or with a mixer. For better results and to ensure a good adherence of the product to the feed, the use of a binder such as oil, molasse or any other commercial binder is advised.

### WHY Santron?

The overall health status of the animals has a strong impact on the financial results of the farm.

#### Economics

Reduce the pressure to control pathogens and production cost.

#### Efficient culture

Improve profitability in antibiotic free production systems.

#### Sustainability
